■ Why MODULIGHTOR fixtures work aesthetically

The reason MODULIGHTOR fixtures work so well aesthetically is because Paul Rudolph didn't just make a sketch of some beautiful fixture and *then* figure out how to make it work. Rather, the function was determined first - how to solve a particular problem or set of problems - and the visual language of the fixture lines evolved from their necessary components.

Because they were never intended to be a 'style statement' per se, the fixtures fit into any environment when specified thoughtfully. With finish and proportion a MODULIGHTOR fixture will look perfect in *any* environment.
